Subject: low burn rate testing
Attachments: US Stove SP1000-EPA-Report.pdf

Stef, more testing questions... If unit tests a 0.53kg/hr for the low burn segment of ASTM 2779 (see page 28), but its conditioning data shows that it ran at ~0.2 kg/hr for almost 50 hours (page 19), did it really test at the lowest burn rate during certification testing?
